EXPERIENCE

● May 2025
Present

SOFTWARE DEVELOPER
Innolytics AG. Leipzig-(Remote)

- Development and optimization of a B2B SaaS platform using Laravel (MVC), Blade, PHP 7.4, HTML5, CSS3/SCSS, Tailwind/Bootstrap, and JavaScript.
- Implementation of a modern, professional, and responsive design with a mobile-first approach for all screen sizes.
- Implementation of additional front-end features such as Darkmode JS and Mobile Detect 3.74.
- Creation and editing of widgets, including for audits, automation, workflow progress, social interactions, status change reasons, and much more.
- Adaptation and maintenance of PDF generation for enterprise customers (configurable visibility of printed widgets).
- Updating platform libraries and Composer packages, as well as refactoring and code cleaning to improve clarity and maintainability.
- Use of MariaDB (SQL) for database queries and integration into the application.
- Processing of tickets to resolve customer issues, including analysis, bug fixing, and testing.
- Work in various environments: dev server, test server (Customer Success), and live server at the customer site.
- Development with PhpStorm & Laravel Herd, version control with Git & Bitbucket (including code reviews).
- Agile sprints with Jira for requirements management and feature implementation.
